Molly McMains, PhD, Fresno Unified School District

# Quality Assurance via Learning Analytics: National Standards for Quality Online Programs

<https://www.nsqol.org/the-standards/quality-online-programs/>

**I4** Courses offered through the program utilize regularly evaluated technology that supports the learning goals and enhances the learning experience.

**J3** Teachers incorporate a process of continual self-assessment, using learning analytics to inform changes in pedagogy and instructional practices.

**K (1-4)** A quality online learning program values positive learner outcomes and takes a comprehensive, integrated approach to measuring and monitoring progress toward defined learning objectives.

# What did we hope to learn?

- How did different groups of students/families and teachers *experience* remote learning?
- What *bright spots/growth opportunities* can be gleaned from students'/families' experiences, and from teachers' experiences for:
  - teaching and learning?
  - the district?
  - the field?

# How did we find out?

Learning experience

=

Combined iReady ELA & Math trends

+

Students' and teachers' descriptions & perceptions

Created by barson from Noun Project

We analyzed Project Constellation data

Created by They Nayem from Noun Project

and we listened to them!

# What did we learn?

- There emerged four patterns of learning over the year
- These patterns were different for different groups of students, and across types of learning environment (remote, simultaneous remote + in-person)

# Accelerating

35% of students experienced **slightly increased growth** aligned with return to in-person learning, suggesting an “**Accelerating Pattern of Learning**” across the year

*\*comparisons made to overall proportions in the dataset*

More\* students who were:

- In 4th grade
- African American
- Hispanic
- Learners of English
- Living with low income
- Receiving Special Education supports

Started the year with lower\*:

- PLI dosage
- Years PLI experience
- PLI partner or lead site experience
- English literacy proficiency
- Math proficiency

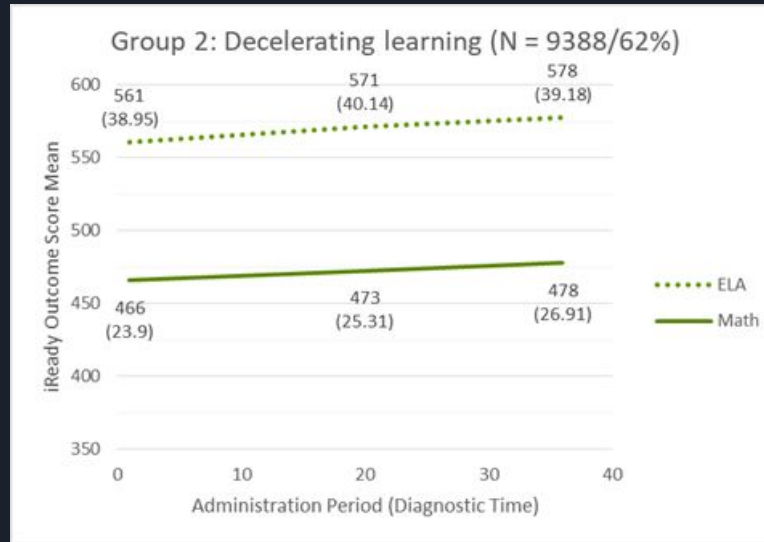

# Decelerating

62% of students experienced **slightly decreased growth** aligned with return to in-person learning, suggesting an “**Decelerating Pattern of Learning**” across the year

*\*comparisons made to overall proportions in the dataset*

More\* students who were:

- In 6th grade
- White
- Redesignated learners of English
- Proficient in English literacy
- Proficient in Math

Started the year with lower\*:

- Need for special education supports

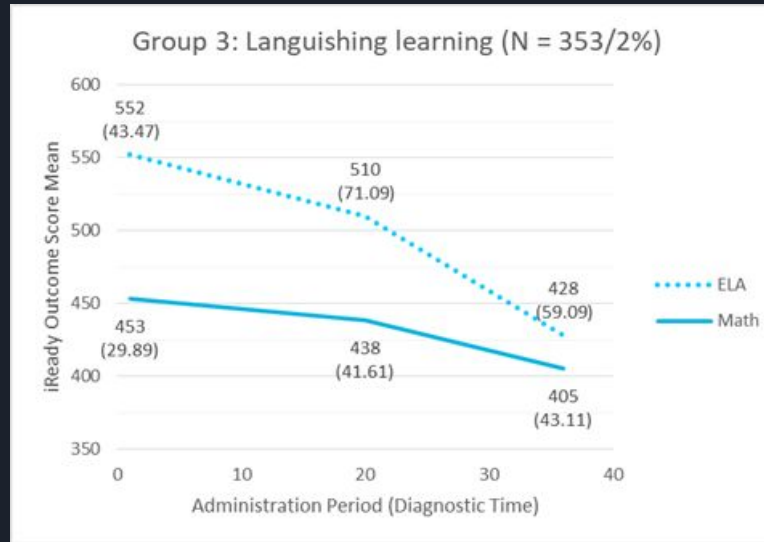

# Languishing

2% of students experienced **decreased learning** both in remote and through return to in-person learning the school year, suggesting a “**Languishing Pattern of Learning**” across the year

*\*comparisons made to overall proportions in the dataset*

More\* students who were:

- Living with low income
- Experiencing homelessness
- Proficient speakers of English
- Receiving Special Education supports
- Proficient in English and Math

Started the year with lower\*:

- PLI dosage
- Years PLI experience

Spent fewer\* minutes using MS Teams

# Thriving

1% of students experienced **sustained growth** both in remote and through return to in-person learning, suggesting an “**Thriving Pattern of Learning**” across the year

*\*comparisons made to overall proportions in the dataset*

*\*\*gender measured and recorded as binary*

More\* students who were:

- In 4th grade
- Male\*\*
- African American
- Learners of English
- Living with low income
- Receiving Special Education supports

Started the year with lower\*:

- English literacy proficiency
- Math proficiency

Spent fewer\* minutes using MS Teams

## BUT...what did teachers and students perceive?

- Families from a variety of groups welcomed the opportunity to reflect upon the pandemic learning experience
- Some parents understood the reflection experience as a therapeutic opportunity
- Teachers welcomed the opportunity to reflect on the pandemic learning experience
- Students identified specific feedback regarding experience, tools and engagement

# Takeaways

Created by André Luiz Gollo  
from the Noun Project

- Quality online instruction at scale is a **process**, not a **product** - the same instruction is experienced differently by different communities
- Centering communities in research and measurement leads to nuanced understanding of how to provide quality online learning experiences to all on an ongoing basis
- Communities include educators and administrators - who are **all** experiencing the learning environment - this work requires a paradigm shift and changes to adults' perceived roles and responsibilities

# Takeaways

Created by André Luiz Gollo  
from the Noun Project

- Rich, deep, quantitative *and* qualitative data are crucial for understanding quality and effectiveness
- *You can do this too* - many of the tools Fresno used are being made available through MS Teams Digital Insights

# Ed Research Works

This presentation was created for the 2022 QM Research Online Conference on behalf of Ed Research Works and Fresno Unified School District.
